Certified Organic LIVE Sprouts

Only live sprouts preserve 100% of their nutritive properties including vitamins, minerals, chlorophyll etc until the moment they are eaten, constituting a real home-grown vegetable garden.

They are "super foods" containing up to 6 times the nutritional values of a mature plant.

Packaged in rigid transport containers, they continue to grow in a greenhouse-like environment until they are eaten.

A storage temperature of approximately 5 degrees C, allows sprouts to be stored for 4 weeks.
